Global Cybercriminals Turn to AI: How Can Companies Respond?

March 7, 2024

Hinshaw partner Cathy Mulrow-Peattie recently authored a *New York Law Journal* byline discussing how artificial intelligence (AI) has been employed by cybercriminals to disrupt cybersecurity prevention and security incident management.

With global cybercrime anticipated to reach \$9.5 trillion in 2024, Mulrow-Peattie explores new AI attack vectors being employed by cyber criminals and AI and cybersecurity-related defense responses; then, leveraging established federal and state regulations and frameworks, she discusses how companies can manage these new cybersecurity compliance risks, including with a review of their cybersecurity policies.
