

Foundations of Privacy and Data Protection

06.01.2023 | 12 PM - 3:30 PM EDT

Instructor-led Foundations of Privacy and Data Protection training provides a base understanding of privacy principles and operations to organizations and individual professionals.

Foundations enables organizations to quickly and thoroughly train their staffs to meet growing privacy responsibilities in areas such as marketing, human resources, technology and finance. The training also defines a common privacy vocabulary that ensures staff members understand each other's priorities and can express privacy needs clearly to all levels of their organizations.

The curriculum covers key privacy and data protection concepts, the Fair Information Practices, the data life cycle, major approaches to and overviews of privacy legislation around the world, and emerging issues in privacy. It also includes case studies of successful and unsuccessful responses to privacy and data protection issues.

For individual professionals, Foundations supplements their existing skills and prepares them for IAPP certification training and new privacy-related careers. Organizations interested in training groups of employees with Foundations should contact IAPP sales for information on group/enterprise pricing.
