

NeuroGaming Conference & Expo 2015

05.06.2015

NeuroGaming 2015 marks the third anniversary for the ever sensational NeuroGaming Conference. Once again, hundreds of CEOs, members of the videogame industry, researchers from the Brain Computer Interface (BCI) community, and thousands of neurogaming enthusiasts will come together to push the limits of the neurogaming experience. This year's addition to neuroGaming is the Entertainment Software and Cognitive Neurotherapeutics Society (ESCoNS) summit where the focus will be on treatment of various brain disorders using neurogames. A variety of panel discussions will cover everything from sensory gaming experiences, to therapeutic neurogaming, to artificial intelligence. In between the cognitively stimulating panels, over 40 companies will be showcasing the newest and most exciting games the neurogaming world has to offer!

Featuring Sheppard Mullin Partner James Gatto in "The Interface Evolves - Sensory Gaming Platforms" on May 6, 2015.
