

Animal Health & Nutrition

The Kansas City Animal Health Home Corridor is home to more than 300 animal health companies, representing the largest concentration in the world. Stinson has assisted in laying the legal groundwork for the industry's development, representing many area animal health companies, industry associations, research organizations and universities.

EXPERIENCE

Our footprint on the industry's infrastructure includes drafting and promoting legislation and working with county and local jurisdictions that have expressed interest in advancing the bioscience industry. Our work with the public and private sectors has yielded a deep understanding of this specialized field.

We possess the legal insight and technical know-how to help animal health and nutrition clients stay on the path toward innovation and growth. We understand the evolution of taking a new product or method from the initial research stage to the marketplace, but we also understand each client has unique, day-to-day business needs. Stinson offers clients an integrated range of services, including intellectual property issues and the defense of proprietary rights, capital formation, mergers and acquisitions, public companies and securities, licensing, regulatory issues, real estate, and product commercialization.

We have assisted clients in the following technology areas:

- Animal drugs
- Biotechnology
- Diagnostics
- Drug delivery
- Genomics
- Nutritional supplements
- Therapeutics and treatments
- Vaccines
- Veterinary devices

Animal Health & Nutrition

- Veterinary products
